

Universal Robina Corporation - Davao Flour Mill

Expanding production facilities in the South

When you hear the acronym URC, we think of products we use everyday, including chips and snacks we enjoyed in our youth (until now), biscuits and confectioneries we enjoyed and continue to indulge in until today.

The Universal Robina Corporation (URC) has been in existence for the past 50 years under the Gokongwei group with a significant and growing presence in the Asean and Oceania markets.

The URC Flour and Pasta Division recently inaugurated their new flour mill in Davao to meet the country's growing demand for high-grade flour, but before the inauguration the consulting team of NAME OF CONTRACTOR drew the plans to provide the facilities to meet URC's high standards.

"Our client's flour mill in Davao needed a storage solution that was up to their high standards..."

-Engr Arnell Dichoso / Project Manager-

The looked no further than to partner with industry leader Bestank to provide the latest in water storage, pressurization and heating technologies to match the demanding criteria that their client (URC) put on the table.

"...we found that in Bestank, they helped us out through the whole process of acquiring our 7x7x3 (147,000L) Bestank Modular Tank in Davao."

-Engr Arnell Dichoso / Project Manager-

The Bestank Modular Tank is an innovative solution for large capacity storage requirements, usually built on site, the system can be designed around existing structures and spaces that may virtually be impossible for cylindrical tanks. Being modular, the tank can be shaped to maximize the space provided by the client. Made from food grade 304 Stainless Steel, the Bestank Modular tank can store and keep clean and potable water safely and securely.
